FOUNDATIONS

THE PEOPLE WHO WILL THRIVE IN THE AI AGE

What will differentiate people is not how smart they are but their relationship to mental effort.

When intelligence is plentiful, volition is valuable. The people who pull ahead won't be the ones using AI to work less — they'll be the ones actively wrestling with it to build their own capabilities.

TRENDS

AI ADOPTION IS ACCELERATING FAST

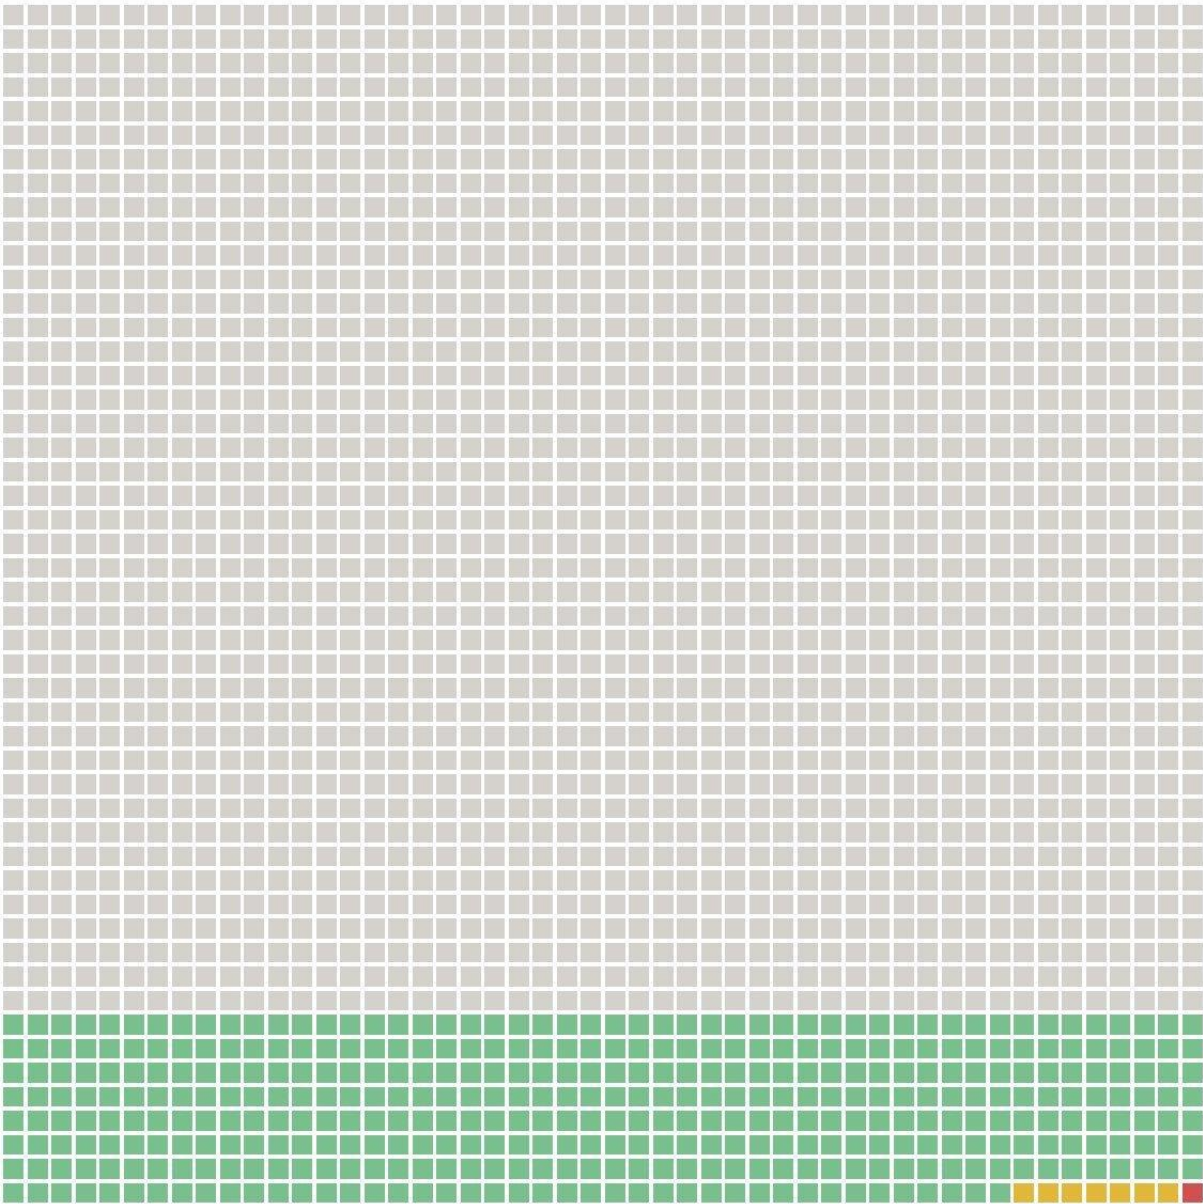

Between February and June 2026, the share of people who've "never used AI" dropped from 84% to 71% worldwide, while free chatbot users grew from 16% to 28%. Paid AI usage roughly tripled in the same window.

Adoption that felt niche a year ago is now moving at population scale.

Each dot is ~3.2 million people

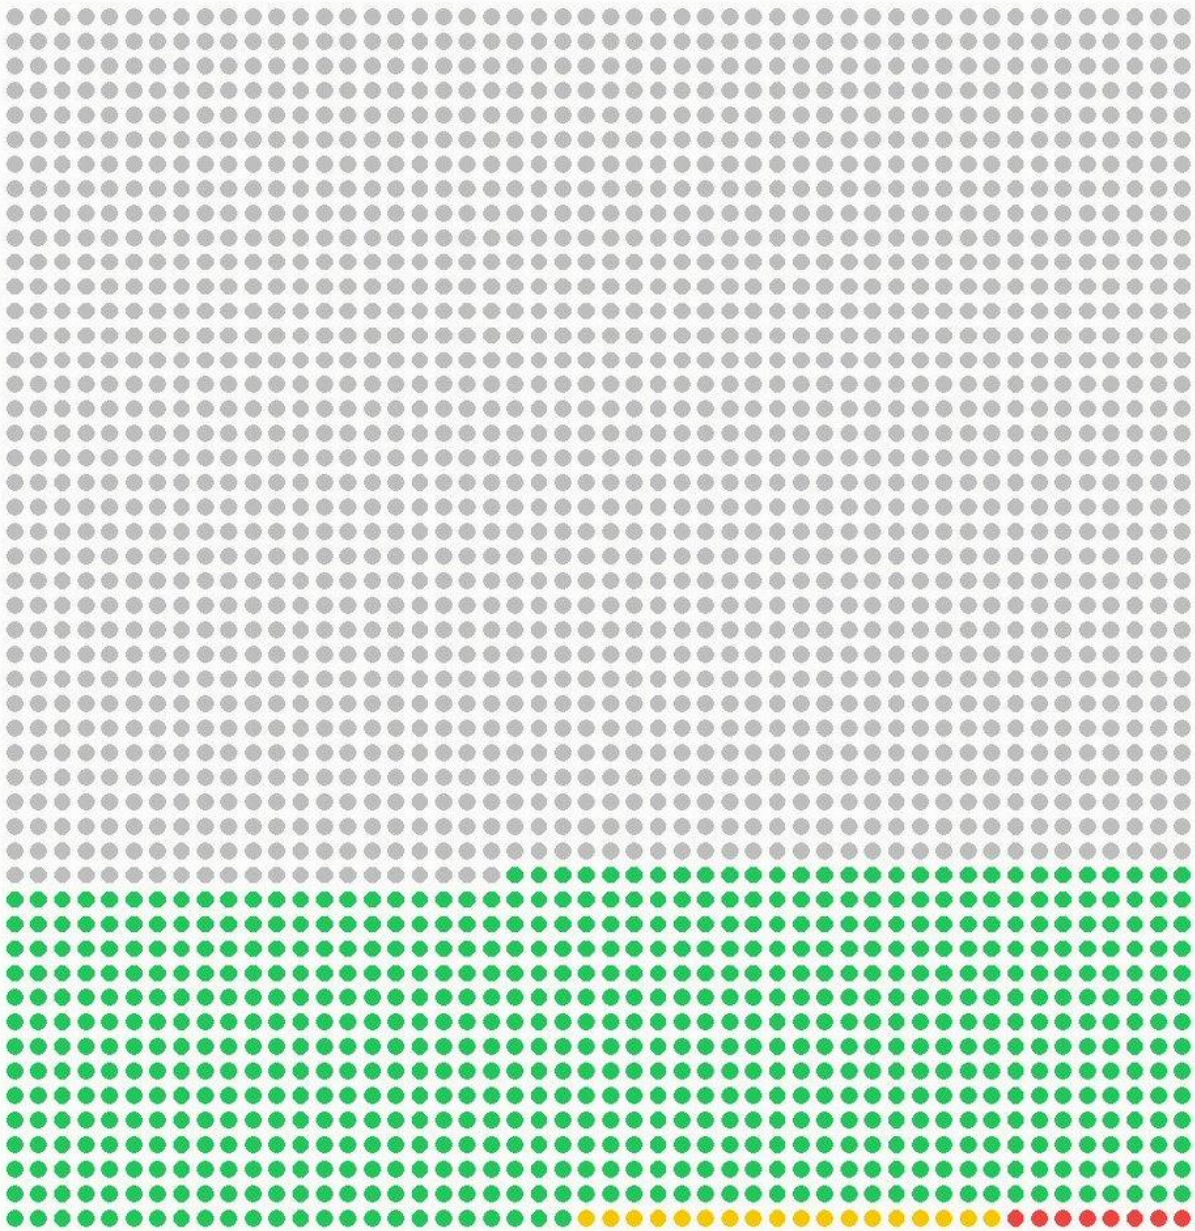

2,500 dots = 8.1 billion humans. Color = most advanced AI interaction, Feb 2026.

Never used AI · ~6.8B (84%) Free chatbot user · ~1.3B (16%)
Pays \$20/mo for AI · ~15-25M (~0.3%) Uses coding scaffold · ~2-5M (~0.04%)

Each dot is ~3.3 million people

2,500 dots = 8.3 billion humans. Color = most advanced AI interaction, June 2026.

Never used AI — ~5.9B (71%)
Free chatbot user — ~2.3B (28%)
Pays \$8-20/mo for AI — ~50-70M (~0.7%)
Uses coding scaffold — ~20-30M (~0.3%)

RESEARCH

INSIDE CLAUDE'S GLOBAL WORKSPACE

New Anthropic research found a divide inside Claude that mirrors the brain: most processing happens outside conscious access, with only a small “J-space” holding what the model can report and reason with directly.

The prompting takeaway: models perform better when goals, constraints, and intermediate steps are made explicit and reusable.

FOUNDATIONS

FOUR TYPES OF AGENTIC LOOPS

Every process needs a clear start and end.

Agentic work can be structured four ways: turn-based (you steer each move), goal-based (an evaluator checks against a goal), time-based (a schedule triggers it), and proactive (it runs and decides with no human in the loop).

Picking the right loop type is key to designing effective AI workflows.

BUILDING

THE NEW DEVELOPMENT CYCLE

A viral chart captures how AI has reshaped building: an idea now takes 5 minutes, a working demo takes about 2 hours — but the final 10% of polish and production-readiness still takes roughly 6 months.

AI has compressed the start of the build cycle dramatically, but the “last mile” problem hasn’t gone away.
